Created this using methods like Grid Layout, CardView, Linear Layout
I could not find out some other icons to use, so for now I have place holders, the other option I had was to continue the line-by-line layout from the top half instead. But I believe something being a toggle instead of a paragraph description would be better.

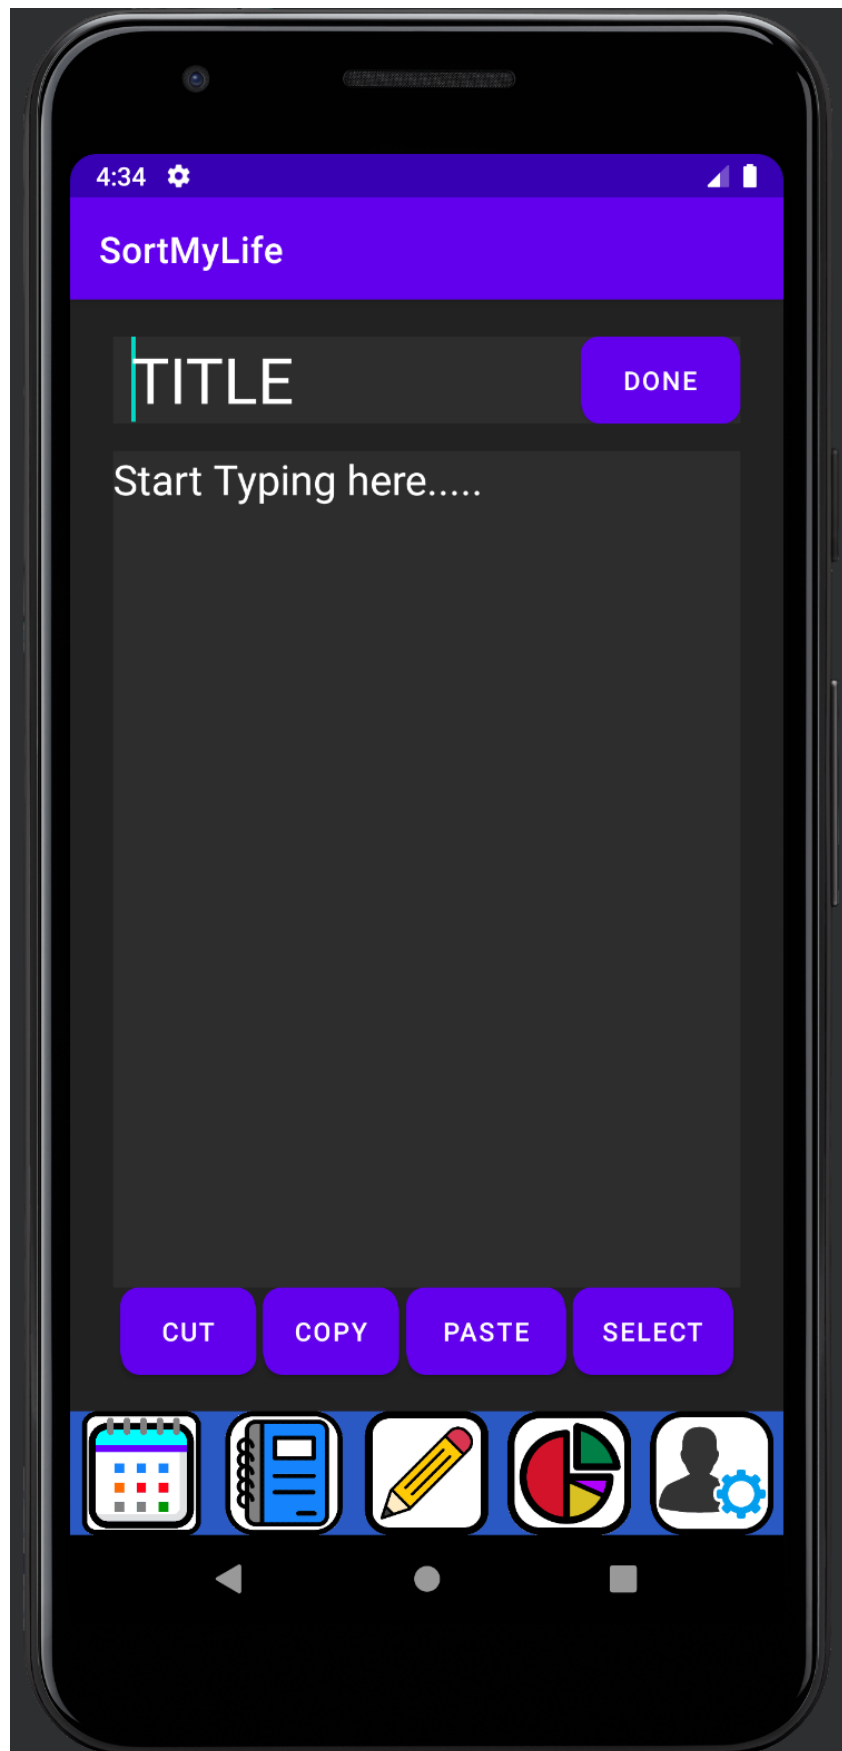

8 - Notes

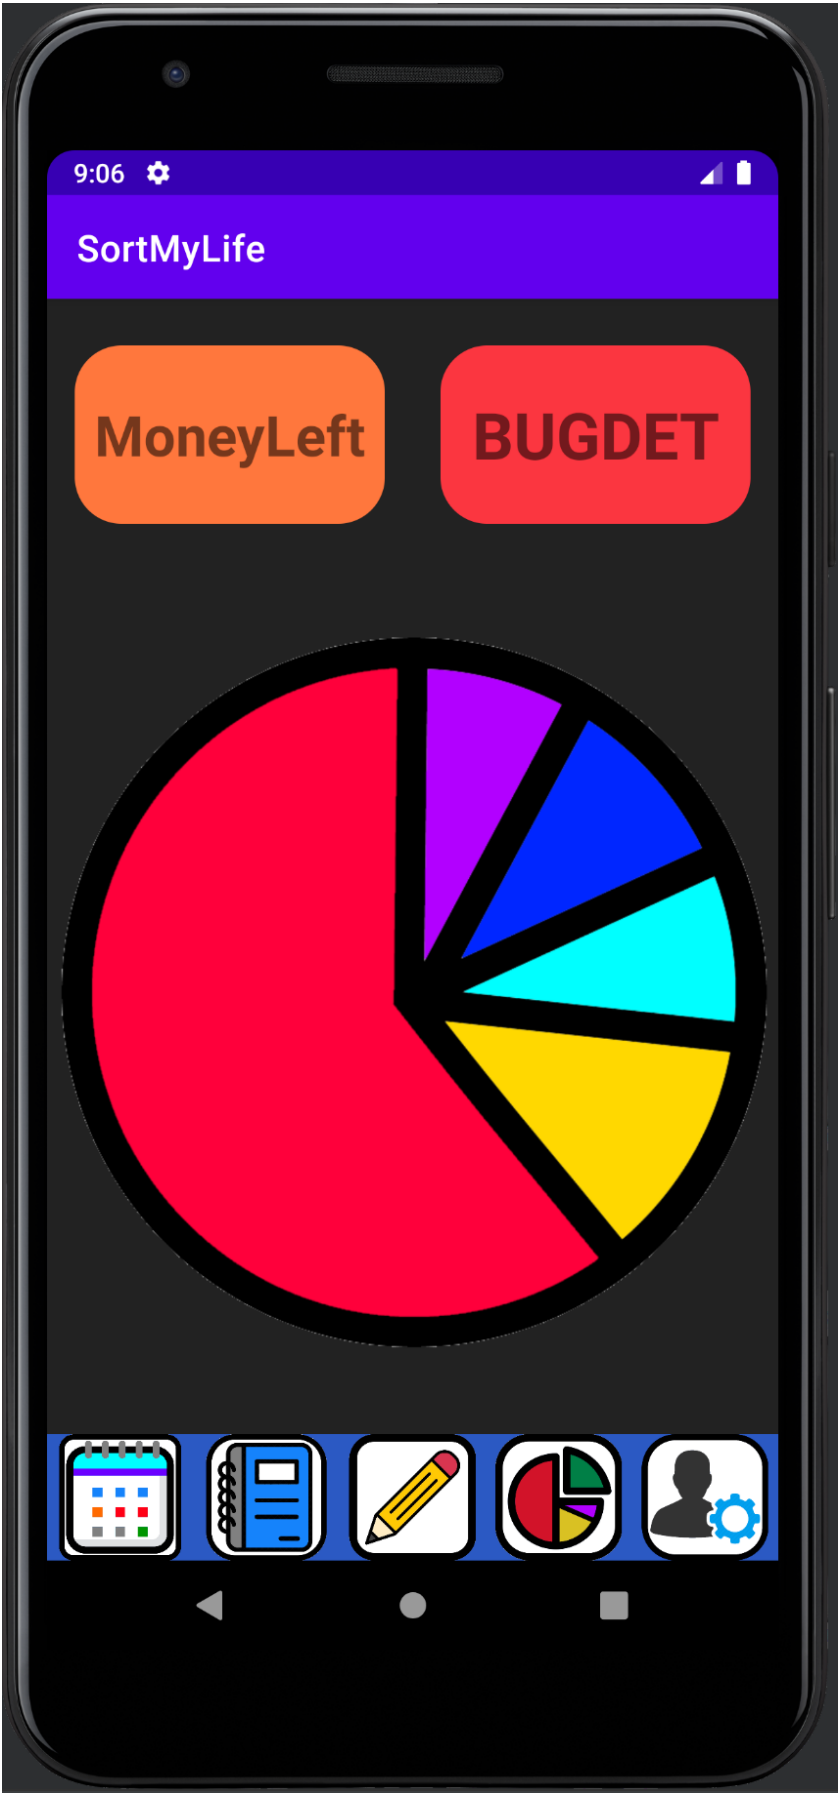

A notebook page holds all the different notes you have created, but only shows the most recent 10 to conserve data usage. Created this using methods like Grid Layout, CardView, and Linear Layout. It should show you a title, and a preview of the note.

There was a similar setup created by Microsoft's Onenote app update which happened Friday 22 and I was shocked because their final result is what I have been working on.

9 - Create a Note
